

SuperStore Sales Dashboard

1. Project Overview

Developed an interactive SuperStore Sales Dashboard using Power BI to analyze sales performance and customer purchasing trends. The dashboard provides insights into total customers, total sales, sales by age group, gender-wise sales distribution, order status by sales channel, monthly sales trends, and the top 5 performing states. Interactive slicers for Gender and Category enable dynamic filtering for deeper analysis. Data was cleaned and transformed in Excel before creating visualizations in Power BI, helping convert raw data into actionable business insights.

2. Dataset Summary

- Rows : 9,995
- Columns : 20
- Key Features: order_id ,customer_id,shipping_state,shipping_country, Index,gender,age,age_group,date,status,category,size,quantity,amount, Shipping_country,b2b.

3. Exploratory Data analysis using excel

- Data loading: data loaded using excel file.
- Data preprocessing: used to find and replace to remove different values.
- Feature Engineering: Created age_group column by using nested IF conditions.
- Power bi Connection : connected to power bi by importing excel file.

4. Dashboard Creation in power bi :

- Imported excel file.
- Extract --> Load --> Transform
- Created new measures using Dax such as total customer, total sales, and total categories as KPI'S.

```

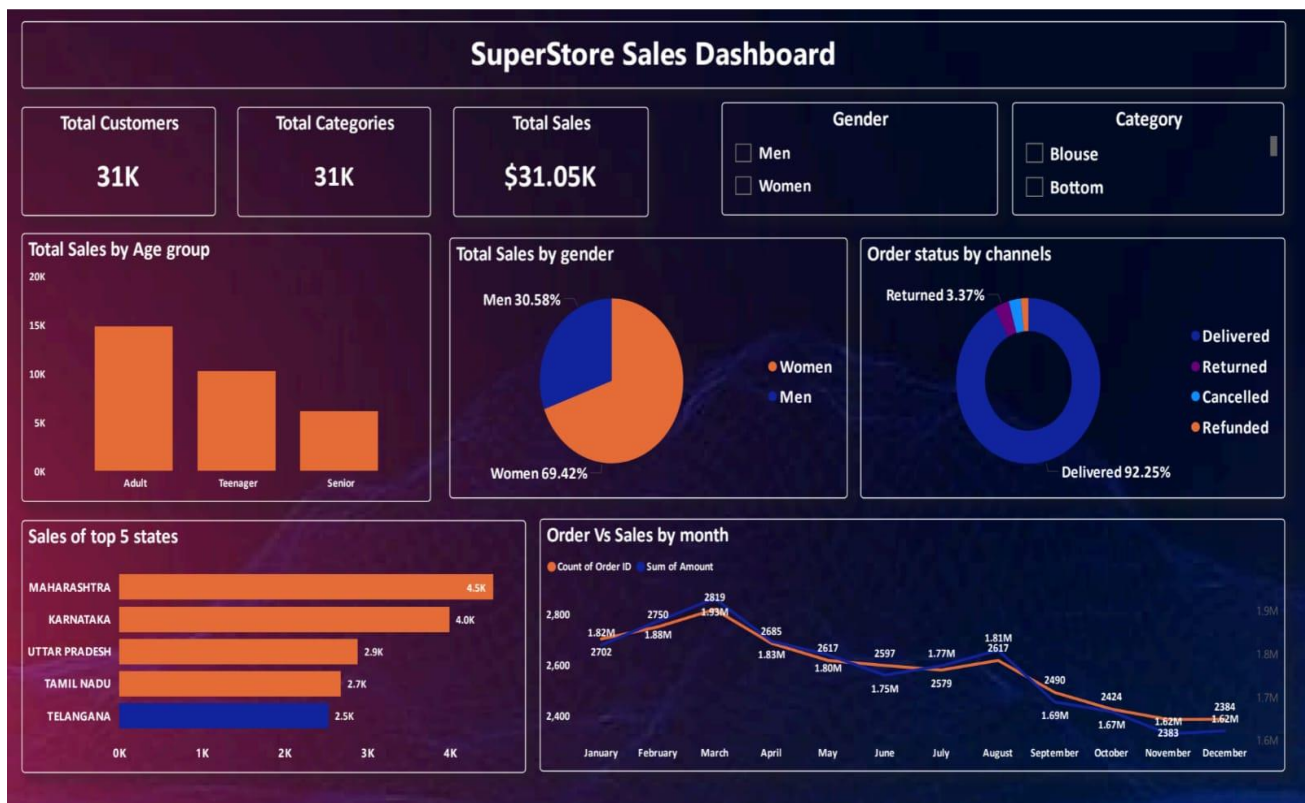

1 Total Sales = COUNT('Wrinda Store Data Analysis 2(Wrinda Store)')[Amount]]
1 Total Customer = COUNT('Wrinda Store Data Analysis 2(Wrinda Store)')[Cust ID]]
1 Total Categories = COUNT('Wrinda Store Data Analysis 2(Wrinda Store)')[Category]]

```

- Created KPI'S such as Total customers, Total sales, Total categories.
- Created slicers such as gender, category based on that we can filter data.
- Created column charts such as total sales by age_group in that we found that most of the buyers are adults and least one's are the senie one's.
- Then created pie chart, donut chart.
- Created top 5 states sales in that telangana has least sales.

- Also created line chart showing month wise orders and sales.

5.Dashboard

6. Recommendations

1. Targeting specific age_groups : analyzing which age group customers contributes the most revenue and run personalized marketing campaigns for those customers.
2. Use seasonal trends: increasing stocks and marketing efforts during months with higher sales and prepare promotional campaigns in advance.
3. Improve customer retention: identify customers who have not purchase recently and send personalized offers or discounts to encourage repeat purchases.
